Module 1: Agenda setting

Introduction

This module is designed to help you set the agenda—discover which problems, stakeholders, and external factors matter most for the malaria fight in your country. The exercises contained here are best done before beginning the planning process to ensure you have the information you need to make informed decisions for an impactful and inclusive campaign.

Section 1 describes the Zero Malaria Starts with Me movement, the urgency of why we need to reinvigorate the malaria fight, the individual, community and country-wide benefits of malaria elimination, and the campaign’s continent-wide scope. The key to this approach is engaging all members of society: political leaders who control government decision-making, including assigning budgets and prioritizing which issues they’ll address through policy and financing; private sector companies that will benefit from having a malaria-free workforce and can support malaria elimination efforts, and the communities affected by malaria, whose buy-in and ownership of interventions is the keystone to success.

Section 2 provides a series of tools that planners can use to develop a well-rounded understanding of their country’s malaria situation. By following this guide, users will create an evidence base to guide decisions, identify and prioritize relevant stakeholders, understand the external factors that may affect efforts, and visualize the causes and effects of malaria problems in their country.

Learning objectives

Agenda setting is the first stage in the advocacy cycle, preparing the ground for campaign activities. By the end of this module, you will:

Figure 2: Agenda setting in the Zero Malaria planning cycle
understand the essential facts about malaria in your country, the significant impact that malaria has on your family’s, community’s and nation’s health and economic progress and the benefits of being a malaria-free country;

know which stakeholders are currently involved in the malaria fight and identify other individuals or organizations who may be interested in getting involved;

understand the political, economic, social, and technological factors that may influence your work; and

analyse various options for action, giving you ideas about where your work can have the greatest impact.

Section 1: Why Zero Malaria?

A continent-wide campaign for a malaria-free Africa

A malaria-free Africa is a bold vision shared by African governments, businesses, and most importantly by the communities directly affected by the disease. Malaria was long considered too difficult to beat. The historic progress seen in the new millennium has changed the opportunity, with global cases and deaths reduced by more than half since 2001. Despite this progress, the threat of malaria resurgence due to drug and insecticide resistance, climate change, and inaction or complacency requires leadership by affected countries to finish the fight.

Africa accounts for over 90% of the global malaria burden. The disease primarily affects young children and pregnant women, causing over 400,000 deaths and 200 million cases each year and costing the continent an estimated US$ 12 billion annually in direct losses. Many of the tools and techniques required to fight malaria exist—what is needed now is the sustained commitment to drive further progress.

Most funding to prevent, control, and eliminate malaria in Africa comes from external donors, including governments, foundations, and international organizations. This imbalance makes national malaria control and elimination programmes vulnerable to external “shocks”—such as a global economic recession or change in donor-country priorities. Today, about one third of funding comes from domestic sources—including public, private, and household spending.

The African Union Catalytic Framework to End AIDS, TB, and Eliminate Malaria in Africa by 2030 has set ambitious targets for eliminating malaria by 2030. Coupled with funding requirement estimates from the WHO2 (see table below) the current state of malaria funding is worrying compared to what will be required—only US$2.7 billion was invested in 2016, less than half of the US$6.5 billion needed annually by 2020. New and increased sources of funding from malaria-affected countries will be necessary to meet this goal.

“Zero Malaria Starts with Me” is a continent-wide campaign for a malaria-free Africa. Co-led by the African Union Commission and the RBM Partnership to End Malaria, the campaign will support African nations in their efforts toward malaria elimination through:

- high-level engagement with government, the private sector, and civil society leaders;

African Union malaria elimination targets

Source: Catalytic Framework to End AIDS, TB, and Eliminate Malaria in Africa by 2030 and WHO Global Technical Strategy for Malaria 2016–2030

advocating for an increase in external and domestic funding for malaria elimination, including through innovative funding mechanisms and the private sector;

- Increasing awareness and ownership at the community level, and

- Providing mission-critical support to malaria-endemic countries through a hands-on ‘Zero Malaria Starts with Me Toolkit’ and on-demand technical assistance.

The campaign draws inspiration from a grassroots movement in Senegal, where all parts of society—including the country’s President, major companies, and community champions—pledged to take personal responsibility for the malaria fight. Momentum grew in support of the country’s goals, and in 2016, Senegal was one of only five countries that reduced cases by more than 50,000 per year, in a year when more than 24 malaria-affected countries saw significant increases in cases as reported in WHO’s World Malaria report 2017.

The Zero Malaria Starts with Me approach recognizes that everyone has an interest in ending the burden of malaria on their family, their community and their country, but may not know how best to work together. By building a coalition of communities, companies, and political and social leaders, the campaign creates lasting relationships, commitments and momentum for the fight to end malaria. The approach outlined in this toolkit can heighten political will for the malaria fight, raise new domestic funding sources to increase access to life-saving tools to prevent and treat malaria, create grassroots ownership of these tools, and ensure that successes are celebrated and setbacks are met with action.

Zero Malaria Starts with Me focuses on three groups of stakeholders critical to a sustainable and ultimately successful fight against the disease: political leaders, the private sector, and communities. Each group has a unique yet complementary role in the fight. The campaign seeks to identify each group’s interest in malaria elimination and unite them for action towards a shared vision. Examples of what might motivate members of each group are listed below, but remember that these could be different in each country.

Motivations and actions of key actors to fight malaria

---

By transforming anti-malaria programmes into signature policy initiatives, advocacy campaigns using this approach can raise the stakes and encourage Presidents, parliamentarians, mayors, and other elected officials to take a personal interest in the performance of malaria interventions.

Private companies can often gain tangible benefits from reducing malaria, through a healthier and more productive workforce, healthier and possibly more prosperous customers, and a positive reputation. Many companies already invest in anti-malaria programmes for their employees, but these initiatives are not coordinated with national efforts. The role of a Zero Malaria Starts with Me campaign is to resolve this coordination problem by giving companies a platform to learn about and participate in shared objectives and an opportunity to fund discrete pieces of work.

Individuals, families, and communities affected by malaria are at the centre of successful campaigns. They alone can apply knowledge about malaria prevention and care to change behaviours and attitudes in a way that makes the disease scarce. Zero Malaria Starts with Me provides guidance on how to share this critical information as well as empower interested individuals to become community champions, leading grassroots anti-malaria efforts in their area.

Most importantly, initial efforts to set up a Zero Malaria Starts with Me campaign will build the relationships and motivation that will sustain efforts. The greatest threat to the fight against malaria is inaction and complacency. This can be the generation to see the end of this debilitating disease. Resurgences have been documented in over 60 countries due to funding gaps, so it is critical that groups continue the fight until it is finished.

Section 2: Understand the malaria challenges in your country

Before beginning any malaria advocacy campaign, you will need to spend time studying the issues before deciding how to get involved. Whether you are new to malaria or have experience working on the disease in government, non-governmental organization (NGO), or private sector roles, these tools can help you broaden your understanding and gain ideas for your approach.

The tools and guidance contained in this section will help you build an evidence base of malaria data, identify current and potential stakeholders that you can engage, understand the external factors that may influence the project, and visualize pathways currently causing the problems you will identify.

Develop a research plan

Successful advocacy is grounded in evidence. Before you choose goals and targets for your campaign, you will need to understand the malaria issues in your country. Later, when you are ready to build partnerships and convince influential actors to support your approach, the evidence points that you gather will help you build powerful arguments for malaria elimination. Thankfully for those working on ending malaria, today there are many resources available, and much research can be done using data that has already been published.

To organize research effectively, many advocacy organizations use simple research planning matrices. These simple tables organize research tasks by topic and specific question (for example, the topic could be "Malaria in Pregnancy" and the research question could be "How many women have access to drugs for preventing malaria in pregnancy?"). The tool then asks users to identify where they will find the information and how they will access and analyse it.

Research planning tool

<table>
<thead>
<tr>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Below is a sample of some of the questions an advocate for improving malaria in pregnancy might ask. Note that they have developed very specific research questions and identified various methods for collecting the data, helping them build a robust evidence base to guide their policy objectives.

Initially, your research should help you develop a clear picture of the malaria landscape in your country to prioritize issues and plan actions (see Module 2). The specific research questions may vary greatly by country—malaria has a very different impact in countries with thousands of cases per year than in countries with just hundreds—but to be effective, all advocates will need a clear picture of their country’s malaria burden, current anti-malaria efforts, access to interventions, political commitment to the malaria fight, funding for malaria programmes, and level of awareness of malaria prevention and care.

Consider using the following guiding questions as a starting point, adding additional research questions whenever necessary.

**Guiding questions for malaria research**

**Malaria burden:** The health, economic, and social consequences of malaria in a country.

- How many cases and deaths are caused by malaria each year?
- When are malaria cases most common? Is transmission seasonal or year-round?
- Which regions are most affected by malaria?
- What are the socio-economic characteristic of the populations most affected by malaria?
- What is the impact of malaria on investment and economic growth in your country?
- What is the impact of malaria on poverty in your country?
- What is the impact of malaria on education in your country?

**Malaria interventions:** What is currently being done to fight malaria.

- What is the current and historic coverage of preventive measures (long-lasting insecticidal nets (LLINs), indoor residual spraying (IRS), intermittent preventive treatment in pregnancy (IPTp), seasonal malaria chemoprevention (SMC), etc.
- What is the current status of access to treatment and diagnostic testing (including the public and private sectors and at the community level)?

**Political commitment:** To what extent do leaders prioritize the malaria fight.

- What are the nationally-defined malaria targets?

---

### Sample research planning tool

<table>
<thead>
<tr>
<th>Topic</th>
<th>Research question</th>
<th>Source of information</th>
<th>Research method</th>
<th>Who will conduct the research?</th>
<th>When will the data be available?</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Malaria in Pregnancy</strong></td>
<td>What percent of pregnant women receive at least one dose of intermittent preventive treatment in pregnancy (IPTp)?</td>
<td>Government statistics, Demographic and Health Survey (DHS) Reports, Malaria Indicator Survey (MIS Reports), National Malaria Strategic Plan</td>
<td>Literature review</td>
<td>Identify a colleague responsible for the research</td>
<td>The date may depend on work time or if the data is not yet published.</td>
</tr>
<tr>
<td></td>
<td>What are the barriers to accessing IPTp?</td>
<td>Health system staff, Focus groups of women</td>
<td>In-person or telephone interviews and focus groups</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>How are IPTp drugs procured?</td>
<td>Ministry of Health (MoH) and National Malaria Control Programme (NMCP) staff, Published policy documents</td>
<td>In-person or telephone interviews and literature review</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Is the national malaria strategic plan up to date?
How has the government demonstrated its public commitment for malaria programmes?
Does the President and other high-level political figures know about and talk about the impact that malaria has on the country?

Funding: To what extent are sufficient financial and other resources directed to the malaria fight.
- Where do funds used to fight malaria in your country come from?
- What is the level of domestic funding for fighting malaria? What are the sources of domestic funding?
- What is the outlook for funding in the coming years? Are there significant gaps?
- What is the amount of international funding for fighting malaria in your country? How secure are those funds (e.g., are those commitments made annually or secured for a specific number of years?)
- Is international funding contingent on your country meeting certain funding requirements, e.g., The Global Fund requires countries to contribute a percentage of funds to secure the full grant amount?

Awareness and Action: To what extent are those at-risk of malaria aware of how to prevent and care for it?
- What proportion of those with access to preventive tools (LLINs, IPTp, etc.) actually use them?
- What proportion of fever cases are tested for malaria?
- What cultural, behavioural and economic barriers, if any, prevent people from seeking care?
- How easy (or hard) it is to get bed nets, for your family, your community? Access to preventive treatment for pregnant women? Is your community benefitting from having your homes sprayed against mosquitoes? How far do you have to go to access malaria treatment?
- Do the health workers in your community know how and do they have the tools to rapidly diagnose malaria?
- Are there marginalised populations that require special attention with regards to malaria in your country (refugees, migrant workers, internally displaced persons, etc.)?

The answers to many of these questions can be found in the resources listed below. Others can be found in government databases or will need to be researched independently through interviews. If significant gaps in data exist, that learning in itself could become an advocacy objective.

Identify malaria stakeholders
One essential piece to understanding malaria in your country is to identify and describe the groups or individuals that influence policy about anti-malaria efforts, are affected by malaria, or have a potential to make an impact-defined here as "stakeholders". The success of the Zero Malaria Starts with Me approach depends on building a coalition of partners working across sectors to create a united front against malaria. Without the support of these key actors, creating change is unlikely.

In malaria, these stakeholders can be roughly grouped as follows:

- **Government actors** working on or influencing the fight against malaria (e.g., how much priority it gets, how much funding is dedicated to the efforts), their leaders, and key constituent groups. These could include the Ministry of Health, the Ministry of Finance, the Ministry of Foreign Affairs, Parliamentarians, and their staff.
- **Civil society and multilateral actors** interested in ending malaria specifically, or health and poverty more generally. These may include NGOs, donors, United Nations agencies, Global Fund Country Coordinating Mechanism members, faith-based actors, and more.
- **Private sector actors** currently supporting anti-malaria efforts, companies whose business interests are affected by malaria (such as mining and other labour-intensive industries), and companies whose clients are affected by malaria (tourism, rural enterprises, telecommunications firms, money transfer firms, and more).
- **The communities** most affected by malaria, described by their geographic and socioeconomic characteristics, or individuals advocating for anti-malaria efforts in their area.
- **Other relevant actors** interested in malaria or whose participation may have an impact. Be creative—this could include celebrities, artists, religious leaders, journalists, and more.

Once you have identified some of the key or potential actors in the fight to end malaria, it is often helpful to list some of their attitudes that will be relevant for your work. Stakeholder analysis tools are a common and adaptable framework for helping advocates determine what approach to use with each actor and how to prioritize their efforts for maximum impact.

Below is an adaptation of the stakeholder analysis tool designed to support a Zero Malaria Starts with Me campaign. List some of the organizations or individuals you have
identified and try to describe their characteristics based on the following dimensions:

- **Interest**: Does the stakeholder currently care about ending malaria, or do they have other priorities?
- **Alignment**: Would the stakeholder support more investments and partnerships for ending malaria, or might they oppose them? If they manage their own anti-malaria activities, do they work in coordination with the national plan?
- **Influence**: How much power does the stakeholder have? This could be in terms of financial resources or important relationships that affect anti-malaria efforts.
- **Potential for engagement**: What could their role be in a malaria partnership?

### Publicly-accessible resources for malaria research

<table>
<thead>
<tr>
<th>Resource</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>African Leaders Malaria Alliance (ALMA) Scorecards</td>
<td>The ALMA Scorecard for Accountability and Action tracks targets for commodity financing, implementation, and other indicators. It is updated quarterly available in English and French. Available at: <a href="http://www.alma2030.org/">http://www.alma2030.org/</a></td>
</tr>
<tr>
<td>Demographic and Health Surveys (DHS)</td>
<td>The DHS capture sociodemographic information as well as key indicators for malaria in many countries, including the coverage and use of preventive tools and access to treatment. Available at: <a href="https://dhsprogram.com/">https://dhsprogram.com/</a></td>
</tr>
<tr>
<td>Malaria Indicator Surveys (MIS)</td>
<td>The MIS contain more malaria-specific indicators than the DHS along with sociodemographic characteristics of the respondents. Available at: <a href="http://www.malariasurveys.org/">http://www.malariasurveys.org/</a></td>
</tr>
<tr>
<td>National Malaria Strategic Plan (NMSP)</td>
<td>Each country's NMSP is a valuable source of information regarding current efforts to fight malaria. They generally contain information about national targets, interventions used, and more. Usually available from each country’s National Malaria Control Programme.</td>
</tr>
<tr>
<td>President’s Malaria Initiative (PMI) Malaria Operational Plans (MOPs)</td>
<td>The PMI MOPs outline the status of malaria interventions and policies in the countries where PMI invests. Available at: <a href="https://www.pmi.gov/resource-library/mops">https://www.pmi.gov/resource-library/mops</a></td>
</tr>
<tr>
<td>Malaria Journal</td>
<td>An open-access scientific journal dedicated to malaria. Available at: <a href="https://malariajournal.biomedcentral.com/about">https://malariajournal.biomedcentral.com/about</a></td>

Contextualize malaria evidence
Before beginning a new project in the public sphere, many project managers use the PEST (Political, Economic, Social, Technological) analysis tool to understand what external factors might influence its success or failure. The PEST tool will help you take a broader look at current developments and will help guide future actions and timing.

The PEST tool asks users to brainstorm relevant external factors in the following categories:

- **Political:** What is the current political climate like and how might that affect your ability to bring political leaders on board?
- **Economic:** What is your country’s economic situation? How healthy is its budget? What is the current strategy for poverty reduction?
- **Social:** What is the state of most people’s knowledge about malaria? Which demographic groups are most affected?
- **Technological:** What are the current tools your country uses to fight malaria, both in the field (LLINs, diagnostic tests) and behind the scenes (data analysis software, rapid reporting systems)?

### PEST tool

Identifying areas for action
At this point, you know the status of malaria, its impact, and what is being done to fight it in your country. You have identified the main stakeholders in this area as well as some potential players to consider, and you understand the broader context. Now, it is time to use this evidence to identify how a campaign approach could support anti-malaria efforts in your country.

An easy way to look at the “big picture” of a problem is through the Problem and solution tree tool. A Problem and solution tree is simply a flowchart with the “Problem” in the middle showing how certain situations contribute to causing the problem and then visualizing the primary and secondary effects of the problem. The problem you choose for this exercise can be anything you are interested in—from a large, multifaceted problem like “malaria exists in my country” to a more specific issue such as the “financing gap for malaria programmes.”
This exercise is best when brainstorming in a group and after developing evidence. Here is a guide for creating your own problem and solution tree, corresponding with the sample tree below.

**Problem tree**
1. Start by defining the core problem—in this case, the malaria programmatic and funding gaps. Consider developing a tree for each commodity gap (e.g., LLINs, artemisinin-based combination therapies [ACTs], rapid diagnostic tests [RDTs], etc.). (Tree Centre).
2. List the effects of the core problem. For example, one effect of a lack of access to malaria commodities is increased child mortality. (Tree Branches).
3. List the underlying causes of the problem. For example, one cause of the funding gaps might be that it isn't a high priority for policy makers to solve since most health funding comes from donors in the form of grants. (Tree Roots).

**Solution tree**
4. Translate the core problem into a solution. Identify solutions by rewriting negative statements into positive ones. For example, “Global and domestic actions are taken to increase funding and fill gaps.” (Tree Centre).
5. List the effects of the solution. With guidance from the NMCP, identify the malaria control commodities and services that are needed but not funded. (Tree Branches).
6. List potential advocacy interventions. Determine the advocacy actions that need to be taken to solve the problem. (Tree Roots).
Sample problem tree

**Effects of Problem**
- People die of malaria.
- Malaria impairs children's learning abilities.
- Households lose incomes because of malaria.
- Malaria prevents economic growth.
- Child and infant mortality is high.
- Business loses profits due to malaria-related absenteeism.

**Underlying Cases**
- When deciding the allocation of domestic public sector resources, malaria is not treated as a development priority.
- Malaria is not seen as a threat to business development by the domestic private sector.
- Bottlenecks to efficient use of resources exist.
- Emerging economies do not have an interest in funding malaria control programmes in Africa.
- Funding from traditional donors is insufficient to meet targets.
- Domestic public budgets are scarce in resources, having to address a variety of development priorities.
Sample solution tree

**Positive effects**

- Children stay in school.
- Millions of human lives are saved due to essential commodities such as LLINs, IPTp, IRS, RDTs and ACTs.
- Strengthened health system.
- Increased agriculture productivity.
- Growth of income per capita reaches the level of malaria-free countries, which is more than 5 times higher.
- Increased household income.
- Lower education and business absenteeism.

**Actions**

- Advocate to public and elected officials to treat malaria as a development priority when deciding the allocation of domestic public sector resources.
- Convince traditional donors to maintain and increase their funding commitments.
- Advocate for cost efficiency and better-integrated services to decrease resource needs (effective ways of procuring LLINs, availability of RDTs, integrated health packages including malaria prevention, control and elimination components).
- Advocate to emerging economics to increase aid for malaria control programmes in Africa.
- Advocate to private sector to allocate resources for education and protection of employees, their families and communities.
- Advocate for innovative financing solutions (malaria bonds, air-taxes, alcohol and tobacco taxes) to address the scarcity of domestic public budgets.
